

KVM Cat.5 Receiver

The KVM-9007 Cat.5 receiver enables user to access the PC, server or KVM switches up to 300 meters away from your keyboard, VGA (monitor) and mouse. It receives the signals from Cat.5 cable and converts them into signals of USB keyboard, VGA and USB mouse respectively.

Compatible with all Built-in remote console port KVM Switches

KVM-9007 can be used with any KVM switch that has a built-in remote console port or Cat.5 dongle. When working with a KVM switch that has a built-in remote console port (KVM-0830/1630), users are able to access the KVM switch and control all the PCs which connected to the KVM switch from 300 meters away.

When working with a Cat.5 dongle (ACC-3000), the KVM-9007 enables users to control a single PC, server or a standard KVM switch remotely.

Suitable for Cat.5 extended server room management

KVM-9007 is a good solution for noisy server room environments where it is unsuitable for people to work for a long period of time. It further facilitates effective management on remotely located computers by controlling the remote systems from a centralized location, such as a dedicated central control room, demonstration room, meeting room, or at your desk.
