

19 inch 8-slot PSE Rack for PIS-3100

POI-2100

H/W Version: 1

Simple Power over Ethernet (PoE)

LevelOne's POI-2100 allows users to power up to 8 devices from a single location. It has 8 slots that accommodate up to 8 Power Sending Units (LevelOne PIS-3100) to create the easiest power sending station on the market today.

For best results, use with PIS-3100 ("High-Power")

PIS-3100 is a "high-power" kit that sends up to 30W which turns regular, non-PoE products into flexible devices that can be placed anywhere. (30W is much higher than IEEE 802.3af PoE

standard of only 15.4W.) This gives installers freedom and flexibility when converting products that consume "high power" into real PoE devices. (Tip: great for large PoE surveillance cameras.)

Easy installation/Plug and Play

Building a large PoE network from a central location has never been easier. With both rack-mount and wall-mount options, installers will find the POI-2100 installation process fast and easy.

Power Cord Socket

Key Features

- Accommodate up to 8 PSE of PIS-3100
- Standard 19" Rack-mountable dimensions allow space-saving convenient installation
