

KVM Cat.5 Receiver

KVM-9007

H/W Version: 1

LevelOne's KVM-9007 is a Cat.5 receiver that enables user to access the server farm and PCs connected to KVM-0831/KVM-1631 up to 300 meters away. This provides an additional remote console for system administrators, unleashing them from the dark, uncomfortable, and noisy environment in the server room.

It offers hot-key or push button switching so users can quickly switch between the computers they need to control. No software is required and plug and play installation means your remote management solution will be ready in just minutes.

Compatible with KVM-0831/1631 KVM Switches w/ Expansion

KVM-9007 is a great accessory to be used with KVM-0831/KVM-1631 thanks to the optional expansion slot, ACC-1000 KVM Cat.5 console module. The ACC-1000 converts the keyboard, video, and mouse signals and sends them over Cat.5 cable. KVM-9007 KVM Cat.5 Console Module sits at the remote console and offers users easy and convenient management of the connected PCs in the server room, up to 300 meters away.

1. USB Keyboard/Mouse Port
2. Remote LED
3. Local LED
4. Select Button

5. Power jack
6. Console Port
7. Local PC Port
8. RJ-45 Port

Key Features

- KVM Cat.5/Cat.5e/Cat.6 signal receiver for the KVM-0831/KVM-1631 KVM switches
- Extends, transmits and receives KVM Cat.5 signals from up to 300 meters (1000 feet) away
- Designed for application with LevelOne KVM expansion switches with optional ACC-1000 KVM Cat.5 Console Module
- Switching computers by push button or Hot Key commands
- LED indicators for computer status or data transmission
- Easy installation with no additional software requirement
