IES-0850

4 x 802.3af PoE + 4 FE Web Smart Switch -40 to 75C, DIN-rail

User Manual

Preface

This manual describes how to install and use the Hardened Web-Smart PoE Ethernet Switch. This switch introduced here is designed to deliver full scalability with web-based management functions. Capable of operating at temperature extremes of -40°C to +75°C, this is the switch of choice for harsh environments constrained by space.

Port 1 to port 4 on this switch supports IEEE802.3af Power over Ethernet (PoE) Power Sourcing Equipment (PSE) and can detect an IEEE802.3af compliant Powered Device (PD). Using external 48VDC power inputs through Terminal Block or Power Jack, data and power can be transmitted to a Powered Device (PD) over the same twisted-pair Ethernet cable through port 1 to port 4 on the switch.

To get the most out of this manual, you should have an understanding of Ethernet networking concepts.

In this manual, you will find:

- Features on the Hardened Web-Smart PoE Ethernet Switch
- Illustrative LED functions
- Installation instructions
- Management Configuration
- Specifications

Overview

Hardened Web-Smart PoE Ethernet Switch

LevelOne IES-0850 Industry Ethernet Switch provides 4 PoE ports of 10/100Base-TX plus 4 ports of 10/100Base-TX Ethernet to enable high speed network at mission-critical environment. This device is designed to be mounted on an industry standard DIN-rail, plus the clearly visible status LEDs provide simple monitoring of port link activity.

High Reliability

All components are built to withstand harsh environment applications without compromise where humidity, temperature variation and even shock vibration are concerns, including Electric & Utility, Critical Infrastructure, Transportation and Surveillance Security. This device operates under -40 to 75 Celsius (-40 to 167 Fahrenheit) temperature.

Web Management

Web-based GUI management features implementation of Port-based VLAN, IEEE802.1p QoS, Prioritised DSCP, set up Admin Password with ease. Plus, the Power over Ethernet ports can be On / Off and limits the power budget remotely

Power over Ethernet

This switch is Power Sourcing Equipment (PSE), and it is fully complied with IEEE 802.3af PoE standard at maximum 15.4W power budget per port. It helps to save infrastructure wiring costs dramatically by eliminating electric wiring and less UPS needed.

Safety

This device has been tested under UL508 standard for Industrial Control Equipment to endurance under test turn on and off 6,000 times while loaded, with no single failure. It's highly reliability and safety measurement to ensure field hardened, especially for the harsh environment.

Features

- Complies with NEMA TS1/TS2 Environmental requirements such as temperature, shock, and vibration for traffic control equipment.
- Complies with EN61000-6-2 & EN61000-6-3 EMC Generic standard immunity for Industrial environment.
- Manageable via Web browser interface.
- Supports IEEE802.3af Power over Ethernet (PoE) Power Sourcing Equipment (PSE).
- Supports IEEE802.3/802.3u/802.3x. Auto-negotiation: 10/100Mbps-full/half-duplex; Auto MDI/MDIX.
- 100Base-FX: Multi mode SC or ST type; Single mode SC or ST type; WDM Single mode SC type.
- Supports 1024 MAC addresses. Provides 1M bits memory buffer.
- Store-and-forward mechanism.
- Full wire-speed forwarding rate.
- Alarms for power and port link failure by relay output.
- Power Supply: Redundant 48VDC Terminal Block power inputs and 48VDC DC JACK with 100-240VAC external power supply.
- Operating voltage and Max. current consumption: 1.5A @ 48VDC. Power consumption: 72W Max.
- -40°C to 75°C (-40°F to 167°F) operating temperature range. Tested for functional operation @ -40°C to 85°C (-40°F to 185°F). Web-Smart function operating temperature @ -20°C to 85°C (-4°F to 185°F).
- Reset button on front panel.
- Front panel port status LEDs.
- Hardened aluminum case.
- Supports DIN-Rail, Panel, or Rack Mounting installation.

Package Contents

When you unpack the product package, you shall find the items listed below. Please inspect the contents, and report any apparent damage or missing items immediately to your authorized reseller.

- IES-0850 Hardened Web-Smart PoE Ethernet Switch
- Quick Installation Guide
- CD User Manual

Front Panel Display

2. The relay contact closes if Power3 is failed but Power1 and Power2 are both on.

DC Jack PW3	DC Jack	48VDC
----------------	---------	-------

Note:

DC Terminal Block Power Inputs: There are two pairs of power inputs can be used to power up this switch. Redundant power supplies function is supported.

DIN rain Mount

- Fix the DIN rail attachment plate to the back panel of the switch.
- Installation: Place the switch on the DIN rail from above using the slot. Push the front of the switch toward the mounting surface until it audibly snaps into place.
- Removal: Pull out the lower edge and then remove the switch from the DIN rail.

10/100Base-TX Connector

The following lists the pin-out of 10/100Base-TX ports.

Pin	PoE Port (1 to 4)	Standard Port (5)
1	Output Transmit Data +	Input Receive Data +
2	Output Transmit Data -	Input Receive Data -
3	Input Receive Data +	Output Transmit Data +
4	Positive (VCC+)	NC
5	Positive (VCC+)	NC
6	Input Receive Data -	Output Transmit Data -
7	Negative (VCC-)	NC
8	Negative (VCC-)	NC

Connecting to Your Network

Cable Type & Length

It is necessary to follow the cable specifications below when connecting the switch to your network. Use appropriate cables that meet your speed and cabling requirements.

Cable Specifications

Speed	Connector	Port Speed	Cable	Max.
		Half/Full Duplex		Distance
10Base-T	RJ-45	10/20 Mbps	2-pair UTP/STP	100 m
			Cat. 3, 4, 5	
100Base-TX	RJ-45	100/200 Mbps	2-pair UTP/STP	100 m
			Cat. 5	
100Base-FX	ST, SC	100/200 Mbps	MMF (50 or	2 km
			62.5µm)	
100Base-FX	ST, SC	100/200 Mbps	SMF (9 or 10µm)	20, 40, or 75
				km

Cabling

- Step 1: First, ensure the power of the switch and end devices are turned off.
- <Note> Always ensure that the power is off before any installation.
- Step 2: Prepare cable with corresponding connectors for each type of port in use.
- Step 3: Consult Cable Specifications Table on previous page for cabling requirements based on connectors and speed.
- Step 4: Connect one end of the cable to the switch and the other end to a desired device.
- Step 5: Once the connections between two end devices are made successfully, turn on the power and the switch is operational.

Web Management

The switch provides a browser interface that lets you configure and manage the switch remotely.

After you set up your IP address for the switch, you can access the switch's web interface applications directly in your web browser by entering the IP address of the switch. You can then use your web browser to list and manage switch configuration parameters from one central location, just as if you were directly connected to the switch's console port.

Web-Based Browser Management

The switch provides a web-based browser interface for configuring and managing the switch. This interface allows you to access the switch using a preferred web browser.

This chapter describes how to configure the switch using its web-based browser interface.

Default Setting

IP address: 192.168.1.10 User Name: admin Password: [Blank]

Logging on to the switch

🗿 Login - Microsoft Internet Explorer

🖉 Done 🔮 Interne	

SWITCH IP ADDRESS

In your web browser, specify the IP address of the switch. Default IP address is 192.168.1.10.

USER NAME

Enter the factory default user name: admin.

PASSWORD

Enter the factory default password (no password).

Or enter a user-defined password if you followed the instructions later and changed the factory default password.

Then click on the "OK" button to log on to the switch.

Browser Interface

The web browser interface provides groups of point-and-click buttons at the left field of the screen for configuring and managing the switch.

System Setup

System Configuration:

- 1. DHCP Client: Click and choose "Enable" or "Disable" to enable or disable the Switch as DHCP client to be automatically supplied an IP address, gateway address, and subnet mask from DHCP server.
- 2. IP Address: Click in "IP Address" text box and type a new address to change the IP Address.
- 3. Subnet Mask: Click in "Subnet Mask" text box and type a new address to change the Subnet Mask.
- 4. Default Gateway: Click in "Default Gateway" text box and type a new address to change the Default Gateway.
- 5. Cancel: Click "Cancel" button to cancel your settings.
- 6. OK: Click "OK" button to update your settings.

Password Configuration:

- 1. Old Password: Click in "Old Password" text box and type in the old password.
- 2. New Password: Click in "New Password" text box and type in a new password.
- 3. Confirm Again: Click in "Confirm Again" text box. Type the same password in "New Password" text box again to verify it.
- 4. Cancel: Click "Cancel" button to cancel your settings.
- 5. OK: Click "OK" button to update your settings.

System Reset/Restore to default:

- 1. Load Default: Click "Load Default" button to restore the default settings of the Switch.
- 2. Reset System: Click "Reset System" button to restart the Switch.

Firmware Upgrade

Firmware Update

- 1. Cancel: Click "Cancel" button to cancel firmware update request.
- 2. Update: Click "Update" button and wait for firmware update request being processed.
